EDUCATION

Minerva University	San Francisco, CA
Bachelor of Science in Computational Sciences	May 2026
Relevant coursework: Data Structures and Algorithms, Linear Algebra, Calculus, Statistics, Theory of Computation, Artificial Intelligence, Optimization, Software Engineering.	

RELEVANT EXPERIENCE

Microsoft - Data Engineer Intern Redmond, WA	May 2025 - August 2025
- Worked on the Xbox Gaming Experimentation team to expand and scale the assignments verification tool. - Extended support from a single management group to 8 experimentation management groups. - Reduced scorecard generation and assignment validation time from 1 day to under 10 minutes post-experiment. - Designed and deployed 9 management-group-specific NRT snapshot tables with 28-day retention, replacing uncategorized raw telemetry data tables previously limited to 5-day retention.	
Microsoft - Data Engineer Intern Redmond, WA	May 2024 - August 2024
- Developed automated data pipelines, increasing data processing efficiency by 30% across diverse stores and vendor platforms. - Created and maintained 10+ automation scripts, improving workflow execution time by 50% while ensuring 100% data integrity across internal systems. - Partnered with the Gaming for Sustainability Engineering team to deliver 3 curated datasets, enhancing predictive model accuracy by 20% for key decision-making.	
VibeMap - Research and Development Partner San Francisco, CA	September 2022 – April 2023
- Guided development of gamification features that boosted user engagement by 50%, based on sentiment analysis and behavioral insights. - Implemented NLP-driven recommendation systems in JavaScript, improving user satisfaction by 40% and increasing average session time by 3 minutes.	
NeuroMatch Academy - Student Remote	July 2022 – August 2022
- Collaborated with a team of 5 to develop an OCR model with 88% accuracy, employing PyTorch and TensorFlow for efficient image-to-text conversion. - Completed intensive 4-week Deep Learning and Computational Neuroscience program, developing and presenting a novel neural network architecture for CNNs and RNNs.	

PROJECTS

MediBot - Machine Learning Engineer Team of Four	GitHub View Project
- Created a Symptom analysis chatbot to enable non-native English speakers to describe medical symptoms accurately, increasing accessibility for underserved patients. - Leveraged Interswitch ML for text transformation and Hugging Face models, improving symptom-matching accuracy by 40% and reducing misdiagnosis rates by 25%. - Enhanced chatbot intelligence by implementing OpenAI models for dynamic follow-up questions, increasing diagnostic accuracy by 30% and improving user satisfaction scores by 25%.	
Back to the Present – Data Scientist Team of Six	GitHub View Project
- Developed an interactive climate change simulation using machine learning libraries, enabling users to visualize 100+ years of emissions data and explore 5+ mitigation strategies. - Architected a responsive React frontend and FastAPI backend, implementing real-time data visualization and reducing page load times by 40%, resulting in a 25% increase in user engagement. - Implemented LLaMA 3.2 for AI-driven storytelling, creating over 1,000 unique narrative paths and increasing game replayability by 150%. - Integrated ODIAC and EPA datasets to create a high-fidelity emissions model, achieving 98% accuracy in real-world comparisons and enhancing the game's educational impact. - Led a team of 6 to develop an award-winning climate change simulation, securing the People's Choice Award at NASA Space Apps Challenge 2024 among 1000+ competing projects.	
Chess Engine - Game Developer	GitHub
- Engineered a sophisticated chess engine, implementing advanced algorithms including Minimax with alpha-beta pruning, achieving a playing strength of 1500 ELO rating - Implemented Minimax algorithm with alpha-beta pruning, optimizing game tree search and reducing computation time by 60% while maintaining tunable strategic depth. - Implemented Zobrist hashing for board state evaluation, reducing memory usage by 40% and increasing position analysis speed by 3x. - Enhanced end-game play by implementing quiescence search, enabling the engine to accurately evaluate tactical sequences up to 3 moves deep in under 2 seconds.	

SKILLS & INTERESTS

Programming: Python, C++, C, HTML, CSS, Javascript, Data Analysis/Visualization, PROLOG, SQL, Rust, C#, KQL
Tools: Pytorch, TensorFlow, Microsoft Azure, PowerBI, Pygame, PyQt5, FastAPI, Flask, React, OpenCV, OpenAI, C++ Qt, Microsoft Office, SkLearn, Matplotlib, Docker, Spark, IntersystemsML, NLTK
Interests: Number Theory, Problem-Solving, Chess, Competitive Programming
